REASONS FOR ALLOWANCE

1. Claims 1-21 allowed.
2. The following is an examiner's statement of reasons for allowance: As per claims 1, 11, 18, and 21, the prior art fails to teach the elements of the present invention as described in the claims, and specifically, a programmable controller electrically connected to a temperature sensor and electrically coupled to at least one power coupler and programmed to control the operation of at least one temperature modifying device in response to the comparison of a measured ambient temperature from the temperature sensor with at least one set point temperature. As per claim 20, the prior art fails to teach the method of providing a programmable controller that is electrically connected to a temperature sensor and at least one power coupler for removeably engaging the power connector from the temperature modifying device and configuring the programmable controller to be user programmable to control the operation of at least one temperature modifying device in response to the comparison of a measured ambient temperature from the temperature sensor with at least one set point temperature.

Although Weber (US 5,839,654) discloses a programmable temperature control apparatus with a power coupler, temperature sensor, and power connector, he fails to teach the programmable controller electrically coupled to both the power coupler and the temperature sensor.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
